

temp^oguard is the first wireless device of its kind in Australia to offer parents the ability to monitor a child's temperature 24 hours a day without using intrusive methods.

With the **temp^oguard**, a temperature reading can be transmitted to you from as far as 30 metres away, through walls, around corners and updated every 10 seconds, so you are always aware of your child's temperature.

Simply clip your baby's **temp^oguard** fever transmitter to their nappy, pyjama pants or on the waistband included.

Enter the temperature you wish to be alerted at, once the preset alarm temperature is reached, the monitor alerts you by transmitting an acoustic signal every 8 seconds.

If your child's temperature reduces suddenly or the transmitting unit is dislodged, you will also be alerted.

The parent's receiver has the added feature of 6 temperature alarm settings, in .5°C increments - from 36.5°C to 39.0°C.

This new revolutionary and simple to use wireless device stands to change the way we monitor fever in children forever.

Babies:

In the first days that baby arrives home from hospital, use the **temp^oguard** to monitor your child's sleeping temperature, you can now take the guesswork out of determining whether your child is too hot or too cold while asleep.

(Please keep in mind that overheating during sleep is one of the suspected causes of SIDS)

Infants and children:

During teething, injections and illnesses, use the **temp^oguard** to monitor your child's fever, never again will there be a need to wake your child unnecessarily to monitor their temperature, just as importantly, the parent no longer needs to get up and check for signs of fever.

Now you can feel secure in the knowledge that the **temp^oguard** is monitoring your infant as you both sleep.

The ability for early detection is a great weapon for parents as fever may be the first symptom of illnesses such as Middle ear infection, Meningitis, Meningococcal Infection and many other illnesses.

The **temp^oguard** is not a substitute for a visit to your physician. If your child's temperature rises above 37.5°C you should consult your doctor.

You will truly be amazed by the

temp^oguard

Monitor your child's temperature from another room

Features Include
